
Particle samplers

The particle samplers are to monitor a particles for later analysis in accordance to PM10, PM2.5, PM1 and other standards defining monitored fractions.

The samplers can be provided with automatic filter exchange and filter storing in cooled compartments.

The main sampler categories are:

- Isokinetic sampling trains for emission monitoring
- High volume samplers with nominal flow around 30 m³/hr
- Low volume samplers with nominal flow 1-5 m³/hr
- Radioactive isotope samplers
- Engine exhaust samplers
- Working area samplers
